### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: the claims are allowable over prior art of record, because none of the references in alone or in combination discloses

**A variable optical attenuator**, which comprises an incoming fiber for propagating an incoming light beam, a mirror for reflecting the incoming light beam as a reflected light beam, an outgoing fiber for propagating as an outgoing light beam at least one part of the reflected light beam, and an actuator for rotating the mirror so as to vary light intensity of the outgoing light beam, wherein the actuator comprises:

- a plate mounting thereon the mirror;
- a coil disposed on the plate, a driving current being supplied to the coil;
- a housing supporting the plate so that the plate is able to rotate around a rotation axis, which is included on a predetermined plane; and
- a permanent magnet, which is fixed on the housing and generates predetermined magnetic flux density along the predetermined plane.

The underlined limitations are critically since the variable optical attenuator which has a structure suitable for mass-production and whose attenuation function of light intensity can be adjusted in linearly response to the change of a driving current supplied thereto.

Art Unit: 2874

The Fujita (6,304,709 B1) reference and Robinson (6,137,941) reference, both references disclose the variable optical attenuator, but does not disclose the structure (underlined limitations), as discloses in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
